

A scatter plot showing the relationship between an unlabeled variable on the y-axis and 'price' on the x-axis. The x-axis ranges from 0 to 100 with major ticks at 20, 40, 60, 80, and 100. The y-axis ranges from 0 to 100 with major ticks at 0, 20, 40, 60, 80, and 100. The data points are blue dots. There is a high density of points at low prices (below 20) and low y-values (below 20). As the price increases, the points become more sparse. Notable points include a cluster at (10, 10), a point at (15, 85), a point at (40, 95), and a point at (100, 50).
